

Note: Spare part kit V21013 consists of:

Item	Stock code	Qty
Release disk	D81050.B	1 pc
O-ring (15 x 2 NBR70)	G01235	2 pcs

General	Body material	Brass, nickel plated
	Mass	0,68 kg
	Release pressure	70 - 80 bar
	Max. working pressure	200 bar
Operation	<p>The ΔP valve is used to release additional gas cylinder(s) in a system in a predefined sequence. The ΔP valve is activated when the previous shot is released, but the gas flow through the valve is delayed until the pressure in system piping has dropped to 70 - 80 bar.</p> <p>The release of the ΔP valve may be used to release slave valves. Note: line valve needed for slave valves</p> <p>The valve is reset by replacing the release disk.</p>
