Pneumatic Actuator Valve

Stock code D21050.2

TA

05 Oct 2004

| General | Body material | Brass, nickel plated |
|-----------|--|----------------------|
| | Max. working pressure | 200 bar |
| Operation | The valve is normally connected directly or via an adapter to an air or nitrogen cylinder. It is used to release the contents of the cylinder into a GPU, a water accumulator unit (MAU, DAU, KAU,) or an MT3 system or equivalent. Pneumatic actuator valve is released by the release pressure to allow the gas flow to the piping system. To monitor the gas cylinder pressure, the valve is equipped with a pressure gauge and a pressure switch. Once released, the valve remains open as long as the valve is pressurised. | |
